

# Q-COMMERCE

I Choose Q-commerce as my marketplace because my template is about food and restaurant and the best suitable business would be delivering food products in real time and meeting customers demand in a short time period.

My marketplace aims to solve delivering your favourite snacks and food items at your doorsteps without waiting in the queue for hours. It provides food in a very short period of time so the order will be fresh and doesn't lose its taste and quality, and at the same time it will be reasonable for every food lover and lazy people like myself.

My marketplace will make an impact on your life as it will interact with you in many ways not just about ordering food but about exploring foods and getting to know who is cooking for you and what more he is cooking so next time you can order something new and different.

# LINKING SCHEMA
